(b)	
<ul style="list-style-type: none"> <li>• There may be some difficulties in defining the group or 'entity' of companies.</li> <li>• Where a group consists of widely diverse companies in different lines of business, a set of consolidated financial statements may obscure important details unless supplementary information about every segment of the group business is provided.</li> <li>• Consolidated financial statements may be misleading <ul style="list-style-type: none"> <li>(i) The solvency (liquidity) of one company may hide the insolvency of another.</li> <li>(ii) The profit of one company may conceal the losses of another.</li> <li>(iii) They imply that group companies will meet each other's debts (this is certainly not true: a parent company may watch creditors of an insolvent subsidiary go unpaid without having to step in).</li> </ul> </li> </ul>

Study text reference (Page 579-580)	
<p>In a defined contribution plan, the employer pays a regular defined amount as contributions into the plan each year. The contributions are invested and the size of the post-employment benefit paid to the employees depends on how the investments perform.</p> <p>Under defined benefit plan, the size of the post-employment benefit is determined in advance. If the employer's contribution is not adequate to earn expected return to pay the defined post-employment benefits, the employer will be required to pay additional contributions to meet the shortfall.</p> <p>Accordingly the main difference is the nature of the promise.</p>

(a) **Ratios**

- (i) GP ratio = (Gross Profit / Sales) \* 100  
= (2,500,000/6,500,000) \* 100 = 38.46 %
- (ii) Inventory turnover period = (Ave. Inventory / Cost of sales) \* 365  
= (670,000/4,000,000) \* 365 = 61 days
- (iii) Average trade collection period = (Ave trade receivable / credit sales) \* 365  
= (350,000/4,200,000) \* 365 = 30.4 days
- (iv) Interest cover = profit before interest and tax / interest charge  
= [(1,020,000 + 280,000) / 280,000 = 4.6 times
- (v) ROCE = (PBIT / Ave capital employed) \* 100  
= [(1,020,000 + 280,000) / 2,500,000] \* 100 = 52 %
