## Strategic Management Accounting

## Tutorial 2

## Question 1

Smiles Ltd. is a medium scale toothpaste manufacturer who makes two different types of toothpastes in the same factory using same equipment. The two types of toothpastes are Smile White (SW) and Smile Herbal (SH). The annual production overhead of Rs. 10,560,000 has been analysed over five activities as follows;

| Activity | Activity cost pool (Rs.) |
| :--- | ---: |
| Machinery depreciation | $2,500,000$ |
| Indirect Raw materials <br> purchase | $3,200,000$ |
| Set-ups | $1,060,000$ |
| Quality control | $2,000,000$ |
| Production scheduling | $1,800,000$ |
| Total costs | $\mathbf{1 0 , 5 6 0 , 0 0 0}$ |

During the year, Smiles Ltd. has planned to make 300,000 units of SW and 150,000 units of SH. SW requires one hour of machine time per unit while SH requires one hour and 20 minutes of machine time per unit in the production line.
The direct costs incurred for two products are as follows;

|  | SW <br> (Rs.) | SH <br> (Rs.) |
| :--- | :---: | :---: |
| Direct labour | 13 | 15 |
| Direct materials | 20 | 25 |
| Total cost | 33 | 40 |

Further, the annual cost drivers for the two products are given below.

| Cost Driver | Total | Number of each cost driver |  |
| :--- | ---: | ---: | ---: |
|  |  | SW | SH |
| Production runs | 3,600 | 2,600 | 1,000 |
| Purchase orders | 3,200 | 2,400 | 800 |
| Set-ups | 4,000 | 3,000 | 1,000 |
| Machine hours | 500,000 | 300,000 | 200,000 |
| Quality checks | 5,000 | 3,500 | 1,500 |

## Required:

(i) Calculate the total cost of the two products using absorption costing method if overheads are absorbed based on the machine hours.
(ii) Calculate the total cost of the two products using Activity Based Costing (ABC) method
(iii) Discuss the advantages of using ABC over absorption costing.

## Question 2

Triple Limited makes three types of gold watches - the Diva (D), the Classic (C) and the Poser (P). A traditional product costing system is used at present; although an Activity Based Costing (ABC) system is being considered. Details of the three products for a typical period are:

| Production Units | Hours per unit |  | Materials |
| :--- | :---: | :---: | :---: |
|  | Labour hours | Machine hours | Cost per unit (Rs.) |
| Product D - 750 | 0.5 | 1.5 | 20 |
| Product C - 1250 | 1.5 | 1.0 | 12 |
| Product P - 7,000 | 01 | 03 | 25 |

Direct labor costs Rs. 6 per hour and production overheads are absorbed on a machine hour basis. The overhead absorption rate for the period is Rs. 28 per machine hour.

## Required:

(a) Calculate the cost per unit for each product using traditional methods, absorbing overheads on the basis of machine hours.

Total production overheads are Rs.654,500 and further analysis shows that the total production overheads can be divided as follows:

```
%
```

Costs relating to set-ups 35
Costs relating to machinery 20
Costs relating to materials handling 15
Costs relating to inspection $\underline{30}$
Total production overhead 100
The following total activity volumes are associated with each product line for the period as a whole:

|  | Number of Set ups | Number of <br> movements of <br> materials | Number of <br> inspections |
| :--- | :---: | :---: | :---: |
| Product D | 75 | 12 | 150 |
| Product C | 115 | 21 | 180 |
| Product P | 480 | 87 | 670 |
|  | 670 | 120 | 1000 |

## Required:

a) Calculate the cost per unit for each product using ABC principles (work to two decimal places).
b) Explain why costs per unit calculated under ABC are often very different to costs per unit calculated under more traditional methods. Use the information from Triple Limited to illustrate.
c) Discuss the implications of a switch to ABC on pricing and profitability.

## Question 3

Grapeville Estate produces two types of wine. The first is a Standard Chardonnay (StdC) produced in large batches and aged for a relatively short period of time (about four months) in large metal containers. The second wine is a limited edition Vintage Cabernet (VinC) made in very small batches from premium grapes and then aged for more than three years in special French oak barrels to provide a particular taste. The barrels require significant maintenance between batches and can be used only a few times before they lose some of the oak flavour that they transfer to the wine.

The Company currently uses a volume based cost system with total manufacturing overhead cost of Rs $3,750,000$ per annum applied to the two products at the rate of 150 per cent of direct labour cost.

Assume the following production cost information for the most recent year.

|  | Standard <br> Chardonnay <br> (StdC) | Vintage Cabernet <br> (VinC) |
| :--- | ---: | ---: |
| Number of bottles produced | 200,000 | 25,000 |
| Unit cost information | 20 | 40 |
| Direct materials (for grapes and bottles) (Rs) | 10 | $?$ |
| Direct labour (Rs) | $?$ | $?$ |
| Manufacturing overhead (Rs) | $?$ | $?$ |
| Manufacturing cost per unit (Rs) |  |  |

The company has conducted an Activity Based Costing (ABC) analysis and traced the manufacturing overhead cost to four activity pools, with the following cost and drivers.

| Activity | Total Cost (Rs) |
| :--- | ---: |
| Purchasing and receiving materials (grapes) | 900,000 |
| Setting up to produce a new batch of wine | $1,000,000$ |
| Fermenting and aging wine in barrels | 800,000 |
| Inspecting the wine for quality control | $1,050,000$ |
|  | $\mathbf{3 , 7 5 0 , 0 0 0}$ |

The activities required by the two products are as follows.

|  | Standard Chardonnay <br> (StdC) | Vintage Cabernet <br> (VinC) |
| :--- | ---: | ---: |
| Kilo grams of grapes | 400,000 | 50,000 |
| Number of batches | 200 | 200 |
| Number of fermentation days | 30,000 | 170,000 |
| Number of inspections | 2,000 | 18,000 |

## Required:

A. Compute the manufacturing cost per bottle using;
(i) Volume based costing system
(ii) ABC system
B. Discuss two reasons for the cost difference between the two systems with reference to your answers in Part (a).
C. Even though ABC method provides relatively accurate cost information, research conducted in the Europe (e.g. Drury \&Tayles, 2005; Clarke, 1992) indicates that the application of ABC method as a tool of absorbing overhead cost remains at a relatively lower level (e.g. 15\% in UK and 10\% in Ireland). Further, the findings of these studies indicate the level of application of ABC method varies among different firms (Drury, 2007).

Discuss the above statements with reasons.
