OBJECTIVE AND GENERAL PRINCIPLES GOVERNING AN AUDIT OF
FINANCIAL STATEMENTS

Introduction

1. The purpose of this Sri Lanka Auditing Standard (SLAuS) is to establish
   standards and provide guidance on the objective and general principles
   governing an audit of financial statements.

Objective of an Audit

2. The objective of an audit of financial statements is to enable the auditor
to express an opinion whether the financial statements are prepared, in
all material respects, in accordance with an identified financial reporting
framework. The phrases used to express the auditor’s opinion are “give a true
and fair view” or “present fairly, in all material respects,” which are
equivalent terms.

2(a). The “applicable financial reporting framework” comprises those requirements
of accounting standards, law and regulations applicable to the entity that
determine the form and content of its financial statements.

3. Although the auditor’s opinion enhances the credibility of the financial
statements, the user cannot assume that the opinion is an assurance as to the
future viability of the entity nor the efficiency or effectiveness with which
management has conducted the affairs of the entity.

General Principles of an Audit

4. The auditor should comply with the Code of Ethics for Professional
Accountants issued by the Institute of Chartered Accountants of Sri
Lanka. Ethical principles governing the auditor’s professional responsibilities
are:

   (a) Independence;
   (b) Integrity;
   (c) Objectivity;
   (d) Professional competence and due care;
   (e) Confidentiality;
   (f) Professional behavior; and
   (g) Technical standards.

5. The auditor should conduct an audit in accordance with SLaUs. These
contain basic principles and essential procedures together with related
guidance in the form of explanatory and other material.

SLAuS 200
6. The auditor should plan and perform an audit with an attitude of professional skepticism recognizing that circumstances may exist that cause the financial statements to be materially misstated. An attitude of professional skepticism means the auditor makes a critical assessment, with a questioning mind, of the validity of audit evidence obtained and is alert to audit evidence that contradicts or brings into question the reliability of documents or management representations. For example, an attitude of professional skepticism is necessary throughout the audit process for the auditor to reduce the risk of overlooking suspicious circumstances, of overgeneralizing when drawing conclusions from audit observations, and of using faulty assumptions in determining the nature, timing and extent of the audit procedures and evaluating the results thereof. In planning and performing an audit, the auditor neither assumes that management is dishonest nor assumes unquestioned honesty. Accordingly, representations from management are not a substitute for obtaining sufficient appropriate audit evidence to be able to draw reasonable conclusions on which to base the audit opinion.

Scope of an Audit

7. The term “scope of an audit” refers to the audit procedures deemed necessary in the circumstances to achieve the objective of the audit. The procedures required to conduct an audit in accordance with SLAuSs should be determined by the auditor having regard to the requirements of SLAuSs, the Institute of Chartered Accountants of Sri Lanka, legislation, regulations and, where appropriate, the terms of the audit engagement and reporting requirements.

Reasonable Assurance

8. An audit in accordance with SLAuSs is designed to provide reasonable assurance that the financial statements taken as a whole are free from material misstatement. Reasonable assurance is a concept relating to the accumulation of the audit evidence necessary for the auditor to conclude that there are no material misstatements in the financial statements taken as a whole. Reasonable assurance relates to the whole audit process.

9. An auditor cannot obtain absolute assurance because there are inherent limitations in an audit that affect the auditor’s ability to detect material misstatements. These limitations result from factors such as:

   • The use of testing.
   
   • The inherent limitations of internal control (for example, the possibility of management override or collusion).
   
   • The fact that most audit evidence is persuasive rather than conclusive.
10. Also, the work undertaken by the auditor to form an audit opinion is permeated by judgment, in particular regarding:

(a) The gathering of audit evidence, for example, in deciding the nature, timing, and extent of audit procedures; and

(b) The drawing of conclusions based on the audit evidence gathered, for example, assessing the reasonableness of the estimates made by management in preparing the financial statements.

11. Further, other limitations may affect the persuasiveness of audit evidence available to draw conclusions on particular assertions\(^1\) (for example, transactions between related parties). In these cases certain SLAuSs identify specified audit procedures which will, because of the nature of the particular assertions, provide sufficient appropriate audit evidence in the absence of:

(a) Unusual circumstances which increase the risk of material misstatement beyond that which would ordinarily be expected; or

(b) Any indication that a material misstatement has occurred.

12. Accordingly, because of the factors described above, an audit is not a guarantee that the financial statements are free of material misstatement.

**Audit Risk and Materiality**

13. Entities pursue strategies to achieve their objectives, and depending on the nature of their operations and industry, the regulatory environment in which they operate, and their size and complexity, they face a variety of business risks.\(^2\) Management is responsible for identifying such risks and responding to them. However, not all risks relate to the preparation of the financial statements. The auditor is ultimately concerned only with risks that may affect the financial statements.

14. The auditor obtains and evaluates audit evidence to obtain reasonable assurance about whether the financial statements give a true and fair view (or are presented fairly, in all material respects) in accordance with the applicable financial reporting framework. The concept of reasonable assurance acknowledges that there is a risk the audit opinion is inappropriate. The risk

---

\(^1\) Paragraphs 15-18 of SLAuS 500, “Audit Evidence” discuss the use of assertions in obtaining audit evidence.

\(^2\) Paragraphs 30-34 of SLAuS 315, “Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement,” discuss the concept of business risks and how they relate to risks of material misstatement.
that the auditor expresses an inappropriate audit opinion when the financial statements are materially misstated is known as “audit risk.”

15. **The auditor should plan and perform the audit to reduce audit risk to an acceptably low level that is consistent with the objective of an audit.** The auditor reduces audit risk by designing and performing audit procedures to obtain sufficient appropriate audit evidence to be able to draw reasonable conclusions on which to base an audit opinion. Reasonable assurance is obtained when the auditor has reduced audit risk to an acceptably low level.

16. Audit risk is a function of the risk of material misstatement of the financial statements (or simply, the “risk of material misstatement”) (i.e., the risk that the financial statements are materially misstated prior to audit) and the risk that the auditor will not detect such misstatement (“detection risk”). The auditor performs audit procedures to assess the risk of material misstatement and seeks to limit detection risk by performing further audit procedures based on that assessment (see SLAuS 315, “Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement” and SLAuS 330, “The Auditor’s Procedures in Response to Assessed Risks”). The audit process involves the exercise of professional judgment in designing the audit approach, through focusing on what can go wrong (i.e., what are the potential misstatements that may arise) at the assertion level (see SLAuS 500, “Audit Evidence”) and performing audit procedures in response to the assessed risks in order to obtain sufficient appropriate audit evidence.

17. The auditor is concerned with material misstatements, and is not responsible for the detection of misstatements that are not material to the financial statements taken as a whole. The auditor considers whether the effect of identified uncorrected misstatements, both individually and in the aggregate, is material to the financial statements taken as a whole. Materiality and audit risk are related (see SLAuS 320, “Audit Materiality”). In order to design audit procedures to determine whether there are misstatements that are material to the financial statements taken as a whole, the auditor considers the risk of material misstatement at two levels: the overall financial statement level and in relation to classes of transactions, account balances, and disclosures and the related assertions.

18. The auditor considers the risk of material misstatement at the overall financial statement level, which refers to risks of material misstatement that relate pervasively to the financial statements as a whole and potentially affect many assertions. Risks of this nature often relate to the entity’s control environment

---

3 This definition of audit risk does not include the risk that the auditor might erroneously express an opinion that the financial statements are materially misstated.

4 SLAuS 315, “Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement” provides additional guidance on the auditor’s requirement to assess risks of material misstatement at the financial statement level and at the assertion level.
(although these risks may also relate to other factors, such as declining economic conditions), and are not necessarily risks identifiable with specific assertion at the class of transactions, account balance, or disclosure level. Rather, this overall risk represents circumstances that increase the risk that there could be material misstatements in any number of different assertions, for example, through management override of internal control. Such risks may be especially relevant to the auditor’s consideration of the risk of material misstatement arising from fraud. The auditor’s response to the assessed risk of material misstatement at the overall financial statement level includes consideration of the knowledge, skill, and ability of personnel assigned significant engagement responsibilities, including whether to involve experts; the appropriate levels of supervision; and whether there are events or conditions that may cast significant doubt on the entity’s ability to continue as a going concern.

19. The auditor also considers the risk of material misstatement at the class of transactions, account balance, and disclosure level because such consideration directly assists in determining the nature, timing, and extent of further audit procedures at the assertion level. The auditor seeks to obtain sufficient appropriate audit evidence at the class of transactions, account balance, and disclosure level in such a way that enables the auditor, at the completion of the audit, to express an opinion on the financial statements taken as a whole at an acceptably low level of audit risk. Auditors use various approaches to accomplish that objective.

20. The discussion in the following paragraphs provides an explanation of the components of audit risk. The risk of material misstatement at the assertion level consists of two components as follows:

- “Inherent risk” is the susceptibility of an assertion to a misstatement that could be material, either individually or when aggregated with other misstatements, assuming that there are no related controls. The risk of such misstatement is greater for some assertions and related classes of transactions, account balances, and disclosures than for others. For example, complex calculations are more likely to be misstated than simple calculations. Accounts consisting of amounts derived from accounting estimates that are subject to significant measurement uncertainty pose greater risks than do accounts consisting of relatively routine, factual data. External circumstances giving rise to business risks

---

5 SLAuS 330, “The Auditor’s Procedures in Response to Assessed Risks” provides additional guidance on the requirement for the auditor to design and perform further audit procedures in response to the assessed risks at the assertion level.

6 The auditor may make use of a model that expresses the general relationship of the components of audit risk in mathematical terms to arrive at an appropriate level of detection risk. Some auditors find such a model to be useful when planning audit procedures to achieve a desired audit risk though the use of such a model does not eliminate the judgment inherent in the audit process.

SLAuS 200
OBJECTIVE AND GENERAL PRINCIPLES GOVERNING AN AUDIT OF
FINANCIAL STATEMENTS

may also influence inherent risk. For example, technological
developments might make a particular product obsolete, thereby causing
inventory to be more susceptible to overstatement. In addition to those
circumstances that are peculiar to a specific assertion, factors in the entity
and its environment that relate to several or all of the classes of
transactions, account balances, or disclosures may influence the inherent
risk related to a specific assertion. These latter factors include, for
example, a lack of sufficient working capital to continue operations or a
declining industry characterized by a large number of business failures.

• “Control risk” is the risk that a misstatement that could occur in an
assertion and that could be material, either individually or when
aggregated with other misstatements, will not be prevented, or detected
and corrected, on a timely basis by the entity’s internal control. That risk
is a function of the effectiveness of the design and operation of internal
control in achieving the entity’s objectives relevant to preparation of the
entity’s financial statements. Some control risk will always exist because
of the inherent limitations of internal control.

21. Inherent risk and control risk are the entity’s risks; they exist independently of
the audit of the financial statements. The auditor is required to assess the risk
of material misstatement at the assertion level as a basis for further audit
procedures, though that assessment is a judgment, rather than a precise
measurement of risk. When the auditor’s assessment of the risk of material
misstatement includes an expectation of the operating effectiveness of
controls, the auditor performs tests of controls to support the risk assessment.
The SLAuSs do not ordinarily refer to inherent risk and control risk
separately, but rather to a combined assessment of the “risk of material
misstatement.” Although the SLAuSs ordinarily describe a combined
assessment of the risk of material misstatement, the auditor may make
separate or combined assessments of inherent and control risk depending on
preferred audit techniques or methodologies and practical considerations. The
assessment of the risk of material misstatement may be expressed in
quantitative terms, such as in percentages, or in non-quantitative terms. In any
case, the need for the auditor to make appropriate risk assessments is more
important than the different approaches by which they may be made.

22. “Detection risk” is the risk that the auditor will not detect a misstatement that
exists in an assertion that could be material, either individually or when
aggregated with other misstatements. Detection risk is a function of the
effectiveness of an audit procedure and of its application by the auditor.
Detection risk cannot be reduced to zero because the auditor usually does not
examine all of a class of transactions, account balance, or disclosure and
because of other factors. Such other factors include the possibility that an
auditor might select an inappropriate audit procedure, misapply an appropriate
audit procedure, or misinterpret the audit results. These other factors
ordinarily can be addressed through adequate planning, proper assignment of

SLAuS 200
OBJECTIVE AND GENERAL PRINCIPLES GOVERNING AN AUDIT OF
FINANCIAL STATEMENTS

personnel to the engagement team, the application of professional skepticism, and supervision and review of the audit work performed.

23. Detection risk relates to the nature, timing, and extent of the auditor’s procedures that are determined by the auditor to reduce audit risk to an acceptably low level. For a given level of audit risk, the acceptable level of detection risk bears an inverse relationship to the assessment of the risk of material misstatement at the assertion level. The greater the risk of material misstatement the auditor believes exists, the less the detection risk that can be accepted. Conversely, the less risk of material misstatement the auditor believes exist, the greater the detection risk that can be accepted.

Responsibility for the Financial Statements

24. While the auditor is responsible for forming and expressing an opinion on the financial statements, the responsibility for preparing and fairly presenting the financial statements in accordance with the applicable financial reporting framework is that of the management of the entity, with oversight from those charged with governance. The audit of the financial statements does not relieve management or those charged with governance of their responsibilities.

Compliance with International Standards on Auditing

25. Compliance with this SLAuS ensures compliance in all material respects with International Standard on Auditing 200.

Effective Date

26. This SLAuS is effective for all the audits carried out on or after ……….

Public Sector Perspective

1. Irrespective of whether an audit is being conducted in the private or public sector, the basic principles of auditing remain the same. What may differ for audits carried out in the public sector is the audit objective and scope. These factors are often attributable to differences in the audit mandate and legal requirements or the form of reporting (for example, public sector entities may be required to prepare additional financial reports).

2. When carrying out audits of public sector entities, the auditor will need to take into account the specific requirements of any other relevant regulations,

7 The structures of governance vary from country to country reflecting cultural and legal backgrounds. Therefore, the respective responsibilities of management and those charged with governance vary depending on the legal responsibilities in the particular jurisdiction.
statements or ministerial directives which affect the audit mandate and any special auditing requirements, including the need to have regard to issues of national security. Audit mandates may be more specific than those in the private sector, and often encompass a wider range of objectives and a broader scope than is ordinarily applicable for the audit of private sector financial statements. The mandates and requirements may also effect, for example, the extent of the auditor’s discretion in establishing materiality, in reporting fraud and error, and in the form of the auditor’s report. Differences in audit approach and style may also exist. However, these differences would not constitute a difference in the basic principles and essential procedures.
